Boyan(Bryan) Han

Research Assistant, Southeast University, Nanjing, China
boyanhan02@gmail.com — +86-15076911336 — LinkedIn — Website

EDUCATION

Hebei University of Technology, Tianjin, China — September 2020 — June 2024
Bachelor of Engineering in Artificial Intelligence

RESEARCH INTERESTS

Multimodal dLLMs/LLMs, Post-Training of dLLM/LLM, dLLM/LLM Agent System

RESEARCH EXPERIENCE

Southeast University — Advisor: Prof. Yiwei Wang, Prof. Yujun Cai
May 2026 — Now

- Developed AURA, a spatial audio understanding framework combining frozen codec representation reorganization and scene-aware supervision, achieving competitive spatial reasoning performance with approximately 40% of the trainable parameters of specialized baselines and strong zero-shot generalization to general audio tasks. Submitted to TPAMI.
- Developed ManimAgent, a self-evolving multimodal agent framework leveraging VLM-guided reflection and dual-channel episodic memory, improving first-attempt animation generation success from 68.5% to 84.9% while reducing average reflection rounds from 12.2 to 6.5 without model weight updates. **Published on EMNLP 2026**.

UC Merced & Westlake University — Advisors: Prof. Yiwei Wang, Prof. Chi Zhang
April 2025 — May 2026

- Developed a training-free inference algorithm for large diffusion language models using token-level confidence-guided dynamic anchor selection, achieving over 70% format retention in mathematical reasoning and approximately 80% valid JSON generation while preserving reasoning accuracy. **Published on ACL 2026**.
- Identified a visual-degradation-induced jailbreak vulnerability in multimodal LLMs and proposed a structured cognitive offloading defense, significantly reducing jailbreak success rates while preserving visual text recognition accuracy. **Published on ACL 2026**.
- Developed a two-stage Text-to-SQL framework combining autonomous database exploration with dual-agent query generation, significantly improving SQL execution accuracy and generalization to complex, unfamiliar databases, achieving 25.78% accuracy on Spider 2.0-Snow. **Published on ACL 2026**.
- Developed a logic-aware reinforcement learning framework for diffusion language models with multi-dimensional rewards, significantly improving complex reasoning performance and parallel decoding efficiency on the ListOps benchmark.

SKILLS

- **Programming:** Python, C, Shell/Bash, Markdown
- **Framework or Ecosystem:** Pytorch, HuggingFace, WandB, Tree-sitter ...
- **Soft Skills:** Synergistic Collaborator, Intrinsically Motivated, Intellectually Curious
